The July wheat yield and production forecast are based on two surveys conducted by the Southern Plains Regional Field Office: a farm operator survey and an objective yield survey. The farm operator survey was conducted primarily by telephone with some use of mail, internet and personal interviews. The objective yield survey collects actual stalk counts and head weights from plots set up in producer fields across the states of Oklahoma and Texas.

Data provided by Oklahoma and Texas operators are the foundation of the estimates made for the Southern Plains region. We would like to thank all farmers who responded to the Ag Yield survey and to those wheat producers who permitted objective measurements to be taken in their fields.

Oklahoma Wheat Production and Yield

Wheat production for **Oklahoma** is forecast at 96.2 million bushels, up 102 percent from last year. This forecast is down 18.6 million bushels from the Oklahoma June forecast. Yield per acre is expected to average 26.0 bushels, up 9.0 bushels from the previous year. Acres expected to be harvested for grain, at 3.70 million acres, are up 32 percent from 2014.

Wheat production for **Texas** is forecast at 112 million bushels, up 65 percent from last year. This forecast is down 8.4 million bushels from the Texas June forecast. Yield per acre is expected to average 31.0 bushels, up 1.0 bushels from 2014. Harvested acreage for grain, at 3.60 million acres, is up 60 percent from the previous year.

Texas Wheat Production and Yield

Texas Wheat Planted and Harvested

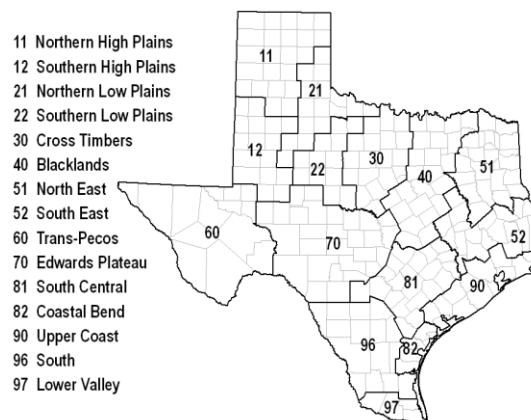

Winter wheat production in the Northern High Plains is forecast at 54.0 million bushels, up 165 percent from last year. Winter wheat production in the Blacklands is forecast at 15.4 million bushels, down 37 percent from the previous year. The Southern Low Plains production is estimated at 15.1 million bushels, up 178 percent from 2014.
